

Bloodstain Evidence Workshop I: A Basic 40-hour course.

The Significance of Bloodstain Evidence in Criminal Investigations

This comprehensive 40-hour workshop demonstrates the flight characteristics and stain patterns of blood commonly related to traumatic events involving bloodshed. Students will conduct individual laboratory experimentation, applying motion and force to static blood, creating their individual documented standards for future reference. Documentation by measurement, sketch and photograph will be emphasized. This course meets certification and membership standards set by the International Association for Identification and International Association of Bloodstain Pattern Analysts.

This is a practical, hands-on course and the learning atmosphere is informal. Students should dress comfortably and be prepared for possible clothing stains. Most importantly, they must be prepared to work! Digital cameras, tripods and lap top computers would certainly enhance the students' learning experience. However, these are not required. All other supplies including calculators and measuring devices are provided. Course notebook, laboratory manual and Volume 3 of the Bloodstain Pattern Identification manual are also provided.

This highly acclaimed workshop has been conducted at police training facilities, colleges and universities throughout the country. It is presented annually at Northwestern University, Center for Public Safety in Evanston, Illinois.

FACULTY:

Judith Bunker, Forensic Consultant

Ms. Bunker is the Associate Director of the Institute of Applied Forensic Technology. She is a nationally recognized expert in the analysis of bloodstain evidence and scene reconstruction. She is consultant and lecturer to law enforcement, prosecutors and criminal attorneys as well as other agencies and individuals throughout the United States. She has provided expert testimony on numerous occasions. She has conducted the Basic 40-hour course since 1978 and the Advanced 40 hour course since 1986.

Don Ostermeyer, Director, Institute of Applied Forensic Technology.

Mr. Ostermeyer is retired from the Orlando Police Department and has been certified as a Senior Crime Scene Analyst and Bloodstain Pattern Examiner. He has over 30 years experience in scene investigations and evidence development. He is nationally recognized as an expert in his field, providing expert testimony and instructional training in Crime Scene Technology Workshops and Investigative Photography throughout the country. Don conducts the 3-Series Crime Scene Technology Workshops semiannually at Northwestern University Center for Public Safety in Evanston, Illinois.

This course will be hosted by St. Charles County Sheriff's Department and is POST certified (3 hrs skill, 37 hrs technical).
